Brainstorming & Idea Prioritization Template

Date	01 October 2026
Team ID	6ab22569f32d8c9d8b2254f2
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	3 Marks

Step 1: Brainstorm and Idea Listing

Each team member lists out as many ideas as possible without judging them at this stage.

S.No	Team Member	Idea / Suggestion	Category	Group No.
1	Team Member 1	Classify tickets into category/subcategory using keywords in the short description (e.g. VPN, password, printer)	Classification	1
2	Team Member 2	Store keyword-to-category-to-group rules in a decision table so admins can edit rules without changing the flow	Classification	1
3	Team Member 3	Send unmatched tickets to a default triage queue so no ticket is lost	Classification	1
4	Team Member 4	Auto-assign the ticket to the correct assignment group based on category	Routing	2
5	Team Member 1	Raise priority automatically when words like outage, down or all users appear	Priority	2
6	Team Member 2	Escalate tickets raised by VIP users or for critical business services	Priority	2
7	Team Member 3	Send an email / notification to the assignee and caller after classification	Notification	3
8	Team Member 4	Build a dashboard showing auto-classified vs manual tickets, misroute rate and SLA trends	Reporting	4
9	Team Member 1	Use Predictive Intelligence (ML) trained on past tickets to predict category and group	AI / Automation	5
10	Team Member 2	Suggest knowledge articles to users for common issues such as password reset	AI / Automation	5
11	Team	Collect ticket details through a	Intake	5

S.No	Team Member	Idea / Suggestion	Category	Group No.
	Member 3	Virtual Agent chatbot before creating the ticket		
12	Team Member 4	Assign tickets to individual agents using round-robin or workload-based rules	Routing	5

Step 2: Idea Prioritization

Rate each grouped idea on feasibility and importance, then select the final idea(s) to move forward with.

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
1	Keyword-based classification in Flow Designer using decision-table rules, with a default queue for unmatched tickets	High	High	1	Yes
2	Auto-assign assignment group and set priority from keywords	High	High	2	Yes
3	Notify assignee and caller when a ticket is classified and assigned	High	Medium	3	Yes
4	Classification and SLA dashboard / reports	Medium	Medium	4	No (future)
5	Advanced options: ML prediction, KB suggestions,	Low	Medium	5	No (future)

Group No.	Final Idea	Feasibility (High/Medium/Low)	Importance (High/Medium/Low)	Priority	Selected (Yes/No)
	chatbot intake, load-based assignment				

Final Selection

Groups 1, 2 and 3 are selected for the first release: a Flow Designer flow that triggers when an incident is created, classifies it by keywords, assigns the group and priority, falls back to a default queue when no rule matches, and notifies the assignee. Groups 4 and 5 are kept for a later phase.
