Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS

- "Another ticket with no category again."
- "Who owns this one?"
- "I can't work on fixes because I'm busy sorting tickets."

THINKS

- "There must be a faster way to route these."
- "If I misroute it, the SLA will be breached."
- "Why can't users pick the right category?"

ASHA
(Service Desk Agent)

DOES

- Reads each short description and guesses the category.
- Reassigns tickets that landed in the wrong group.
- Checks a routing spreadsheet or asks colleagues.

FEELS

- Overwhelmed during peak hours.
- Anxious about SLA breaches.
- Bored by repetitive sorting.

Empathy Map (continued): End User

SAYS

- "My VPN isn't working, please help!"
- "It's been hours and nobody has replied."
- "Why was my ticket moved to another team?"

THINKS

- "I don't know which category to choose."
- "Does anyone even see my ticket?"
- "IT support is slow."

RAVI

(End User / Employee)

DOES

- Types a quick, vague short description.
- Picks a random category or leaves the default.
- Follows up by chat or email when there is no update.

FEELS

- Frustrated while blocked from work.
- Uncertain about ticket status.
- Relieved when someone responds fast.

Empathy Map (continued): Team Lead

SAYS • "Why is my queue full of wrong tickets?" • "I need accurate category reports." • "We need clear routing rules."		**THINKS** • "Automation should handle the obvious cases." • "Workload is uneven across my team." • "SLA targets are at risk."
	MEENA *(Team Lead / Dispatcher)*	
DOES • Reviews unassigned and breached tickets. • Manually reassigns tickets between groups. • Builds reports from inconsistent data.		**FEELS** • Pressured by SLA targets. • Worried about team burnout. • Confident when rules are consistent.
