Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders): exported update set with the flow, subflows and decision table	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	NA
4	Database schema / seed files (if applicable): keyword rules export and sample incidents	Yes
5	Environment configuration file (.env.example or similar)	NA
6	Deployed application URL (if hosted): ServiceNow instance URL	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	*[Yes / No]*

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```
/auto-ticket-classification
  /update-sets       - Exported update set XML (flow, subflows, decision table)
  /decision-table    - Keyword rules export (CSV)
  /test-data         - Sample incidents used for testing (CSV)
  /screenshots       - Flow, test results and dashboard screenshots
  /docs              - Project documentation (Word files)
  README.md          - Setup and run instructions
```

Step 3: Deployment / Access Details

Field	Details

Field	Details
Hosted / Deployed URL	https://dev421497.service-now.com
Login Credentials (Demo)	user_name=admin,password=K%2FjpncCA4P%2B3
Platform / Hosting Provider	ServiceNow cloud (Personal Developer Instance)
Repository Link	https://github.com/itzanthul/321bcaAuto-Ticket-Classification-using-Flow-Designer.git
Demo Video Link	https://drive.google.com/file/d/1jqSayMUQp3NXfjAZuIt-31R7aPYiLREO

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

ServiceNow Personal Developer Instance (free from developer.servicenow.com) with admin access, a modern browser (Chrome or Edge), and the exported update set file.

Step 1: Log in to your ServiceNow instance as an admin.

Step 2: Go to System Update Sets > Retrieved Update Sets and choose Import Update Set from XML. Upload the update set file.

Step 3: Open the imported update set, click Preview Update Set, resolve any problems, then click Commit Update Set.

Step 4: Open Flow Designer (All > Process Automation > Flow Designer) and make sure the flow "Auto Classify Incident" is Active.

Step 5: Open the keyword rules Decision Table and check that the rules are present.

Step 6: Create a test incident (Incident > Create New) with a short description such as "VPN not working".

Step 7: Open the incident and check that the category and assignment group are set. View the run in Flow Designer > Executions.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Classification is keyword-based, so very vague or unusual descriptions may not match any rule.	Such tickets go to the default triage queue; add more keywords to the decision table.
2	Only English ticket text is supported.	Planned for a future release.
3	The classification dashboard is still in progress.	In progress; standard incident reports can be used meanwhile.
